CANADIAN SPRUCE

INFRARED
TECHNOLOGY

Tailor-made design and finishes for a space of total freedom at home

Have you ever felt the need for a moment of pure relaxation after a long day? A space dedicated to resetting mind and body?

Holl's has put all its know-how in the development of this new line of infrared cabins to give you all the relaxation you need.

The innovative «Triple Care» technology enables you to take advantage of the entire range of infrared waves - long and short - and grant yourself that much sought-after "Reset & Restore" effect.

Cleverly arranged shortwave carbon emitters provide a warm atmosphere to relax the mind, while quartz or magnesium emitters allow you to choose between muscle relaxation and detoxification.

You can imagine a multitude of treatments and create a la carte well-being moments for you and your loved ones.

Detoxification of the body and deep relaxation of the mind

SELECTED WOOD TYPES THAT ARE HAND-CRAFTED

Deeply committed to the environment, Holl's uses spruce wood from only sustainably managed forests in Canada in the design of its sauna cabins. The wood, polished and worked by hand, is completely free of knots and resin. A real guarantee of the quality of the sauna that you will install in your home.

VERSATILITY AT THE SERVICE OF WELL-BEING

Triple Care

Multiply our capacity to innovate to better satisfy your desires!

Once again, our R&D team has developed a combination of infrared technologies that results in a complete sauna cabin that reveals itself and will surprise you with each session.

Imagine a multi-care course or create à la carte well-being moments for you and your loved ones thanks to a set of three technologies - carbon, magnesium and quartz.

THE ASSOCIATION OF CARBON WITH DUAL HEALTHY TECHNOLOGY

MAGNESIUM

Magnesium produces IR-C waves that stimulate the skin and promote sudation for deep detoxification.

CARBON

Carbon ensures a warm and gentle heat with its long IRs. Panels on the walls distribute heat evenly throughout the cabin.

QUARTZ

Quartz creates an enveloping and very pleasant warmth that will relieve the entire nervous system, especially around the spine. Choose the intensity of the emitters at the start of the session and throughout your moment in the sauna.

Soft touch, frosted glass infrared panels on the ground ensure a pleasant and homogeneous heat.

USEFUL INFORMATION:

Each emitter can also switch from Quartz to Magnesium independently during the same session. For this, a warm-up time must be provided.

*PERSONALIZE YOUR SESSION
WITH QUARTZ*

Adjust the intensity of each Full Spectrum Quartz emitter at any time, at will, with a simple turn of the wheel.

CHROMOTHERAPY & AMBIENT LED

Enjoy the benefits of colorful atmospheres in your sauna Canopée.

Infrared waves specific to the colours red, orange, yellow, green, turquoise, blue and purple act differently on the body through the skin, which is particularly sensitive to light energies. This positively influences your state of well-being.

Red

Red is a «boost» and this renewed energy is perceived very quickly by the body. It fluidifies blood circulation and promotes the dissolution of the fatty mass.

Green

Green brings balance, harmony and psychological stability. It is also active against skin aging and dehydration.

Blue

Blue is a peaceful colour that calms the mind and acts on skin inflammation.

Do you want a soft and pleasant classic light?

Ambient LEDs in natural colours are an invitation to read.

A SPACE WHERE COMFORT & ERGONOMICS MEET

Inside the Canopée, large solid wood benches are enhanced by a set of slats layed out on the cabin walls.

Once your session has been programmed (tailor-made or pre-programmed «Zen» mode), you can enjoy it in complete comfort thanks to finely studied ergonomics, which translates into a generous bench width offering ample space for everyone.

ACCESSORIES TO MAKE YOUR LIFE EASIER

“ *The Canopée includes a set of accessories to maximize relaxation and pleasure.* ”

The air purifier (ozonator + ionizer) acts as a real lung in the sauna cabin to disinfect and sterilize the air particles as well as the walls of the cabin with ozone, producing negative ions..

The musical atmosphere is provided by a new avant-garde resonance audio system, allowing you to stream your favorite music via USB or Bluetooth without a visible speaker, and with unparalleled quality.

To perfect the ergonomics of the cabin, various supports are included such as a drink holder, a magazine holder, a telephone holder and a towel holder. These are obviously designed in the same type of wood as that of the cabin and are to be added if you deem it useful.
