## Range

*When you choose a Netspa acrylic spa, you're opting for a hot tub that focuses on relaxation through an exceptional set of hydromassage jets.*

You can enjoy your spa during the day or in the evening thanks to the integrated lighting system. A thermal cover protects the bath when not in use.

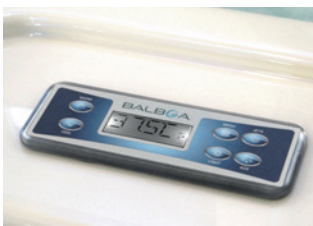

The rounded shape and ergonomics of the tub provide comfort and a deep, targeted massage to relieve muscle tension and eliminate toxins. The composite wood exterior lends a warm, high-end finish to this spa.

hot / cold

Our Celtic range of spas can be packaged with a Poolex spa heat pump. The 5kw O'Spa heat pump from the Spawer range will save you up to 75% energy. Thanks to its high coefficient of performance, your investment will quickly pay for itself.

## 1. HEAT, SAVE

*Enjoy your spa while reducing your electricity bill*

Heating the water in the bath is the biggest expense for a spa. Over the year, for a typical spa, you can expect to spend more than €500\* on electricity. Thanks to your O'Spa heat pump in the Spawer range, you can cut your bill by around €330/year\*, thanks to its performance coefficient of 3 over the whole year! What's more, it will pay for itself in just 2 years.

\* Approximate estimate for a 5-person spa with a 1,000-litre volume

## 2. REVERSIBLE

*With the reversible mode, cooler water when it is warmer outside*

In the event of a higher ambient temperatures, the water in your spa may seem a little too hot. Thanks to the Spawer's reversible mode, you can avoid wasting water by partially draining the bath to add fresh water. Simply select the Cooling mode.

## 3. CONTROL FROM A DISTANCE

*In the middle of a busy day, I log on and manage my spa*

A need to relax? You can connect to your phone app and set up your Spawer's parameters for an optimal experience: change the water temperature or the operating mode. You can even programme your Spawer's operating times.
